 MADE IN GERMANY

PIONEERING VIDEO TECHNOLOGY 'MADE IN GERMANY'

100% DEVELOPED AND MANUFACTURED IN REGENSBURG, GERMANY

WHY 'MADE IN GERMANY' OR 'MADE IN EUROPE' ARE BECOMING MORE AND MORE OF A QUALITY SEAL

The label 'Made in Germany', which is often perceived as old-fashioned, is experiencing an amazing renaissance – especially among customers of B2B video technology solutions. **Reliable supply chains, cybersecurity and privacy** are the most important key words here.

With 100% 'Made in Germany', we guarantee our customers the highest standards in these important fields. **Quality, proximity of suppliers** and our 'Green Global Security' philosophy also ensure sustainability and environmental protection.

Qualification and short distances as locational factors

Maximum vertical range of manufacture also means maximum cybersecurity and data protection

 **MADE IN GERMANY**

PIONEERING VIDEO TECHNOLOGY FROM GERMANY

WHY CHOOSING A GOOD CAMERA IS SIMPLY NOT ENOUGH.

'My ambition and at the same time my task as CTO at Dallmeier is to develop products that offer real added value for the customer and are at the same time discussed on the market. In this respect, probably the greatest challenge for European companies is to perform a real miracle: Reconciling the highest quality standards, competitive prices, ethical responsibility and labor costs.'

We achieve this by combining quality and innovation as part of our "100% Made in Germany" strategy: quality means durability and low maintenance. Innovation saves costs through efficiency and functionality.'

Thomas Reisinger,
Chief Technical Officer (CTO), Dallmeier electronic

GDPR AND CYBERSECURITY

Cybersecurity and data protection play an increasingly important role in today's investment decisions. Dallmeiers' systems meet the highest standards for data protection and have all state-of-the-art features for cybersecurity. On the technical side, we ensure this with regularly executed standardised security tests by external experts. On the political side, we make sure we develop, manufacture and support our products and solutions under 100% constitutional and democratic political framework conditions.

GREEN GLOBAL SECURITY

Dallmeier has long been a certified company for energy efficiency after ISO 50001 and for sustainable environmental management after ISO 14001. In the spirit of 'Green Global Security', waste avoidance and low energy consumption in the production process are just as much part of the corporate philosophy as long life cycles and high energy efficiency of our products.

ETHICAL RESPONSIBILITY

Against the backdrop of geopolitical changes, the aspect of ethical responsibility is becoming more and more important. Companies are increasingly asking themselves what consequences their investment decisions have on the human rights situation in other parts of the world. We adhere to the highest standards in our supply chain and develop, produce and manufacture our soft- and hardware systems in Regensburg, Germany.

MADE IN GERMANY

DOMERA® – BEYOND THE IMAGE.

PROBABLY THE MOST VERSATILE CAMERA IN THE WORLD

The DOMERA® camera series offers a unique combination of:

- **AI-based video analytics**
for a variety of analytics applications with 'Deep AI' object classification in the camera
- **Innovative lighting system**
without the lighting issues of conventional dome cameras
- **Motorised three-axis adjustment**
for easy setting and readjustment via remote access (Dallmeier **R**emote **P**ositioning **D**ome, **RPoD**)
- **Modular housing and mounting system**
for an extremely time-saving assembly and setup, minimal inventory and low training requirements
- **Support of ONVIF profiles M, S and T**
for integration into almost any Video Management System (VMS)

With DOMERA®, more than 90% of all typical video applications can be implemented indoor and outdoor – including maximum quality and security as well as minimum Total Cost of Ownership (TCO).

INTELLIGENT

From image to result

DOMERA® OS
for a wide range of analytics applications, highest cybersecurity and easy configuration.

- AI object classification for accurate results
- Wide variety of analytics applications
- Triggering of events via MQTT, relays, etc.
- Premium maintenance package including updates for the neural network
- A dedicated camera operating system for maximum security and functionality

PICTURE-PERFECT

Don't miss a thing

Smart technologies
for maximum image quality and optimal lighting in every situation.

- Latest SoC technology
- Adaptive IR and white light LEDs
- Utmost light sensitivity
- True HDR

VERSATILE

100 % adaptable

DOMERA® RPoD technology & mounting system
for easy installation and quick readjustment via remote access.

- Easy mounting, installation and motorised three-axis adjustment
- Maximum flexibility
- Fits every customer environment
- Widest variety of mounting, housing and lighting options

INTELLIGENT

AI ANALYSIS WITH DEEP AI OBJECT CLASSIFICATION

DOMERA® cameras are equipped with the latest SoC technology and intensively trained neural networks.

They capture images in high resolution and analyse them independently of movements in the background (green areas, water surfaces, etc.).

Defined objects (people, vehicles, etc.) are classified in real time.

- **Deep AI object classification** based on pre-installed neural networks
- **Integrated EdgeAnalytics apps** for a wide range of applications
- **Regular updates** of the neural networks
- **Customised neural networks** if desired, within the framework of a development partnership

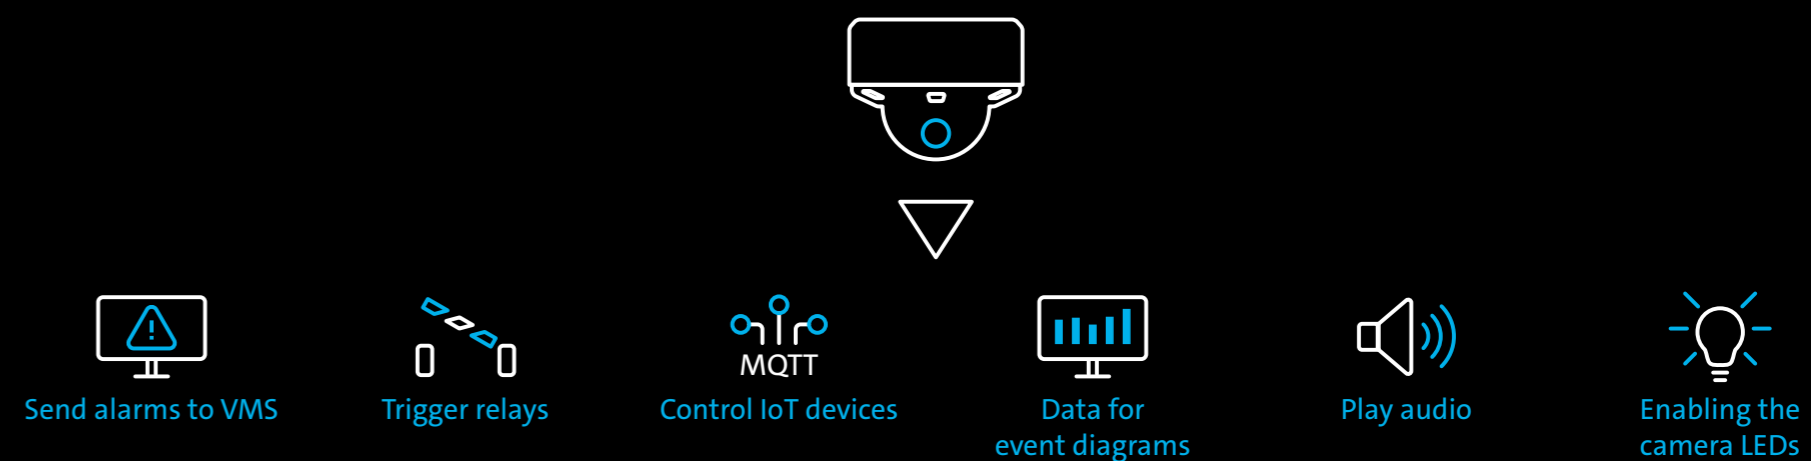

CUSTOMISED ANALYTICS

WHICH ANALYTICS APPLICATION WILL SOLVE YOUR PROBLEM?

OUTPUT OF ANALYTICS DATA

VIA MQTT AND OTHER PROTOCOLS

PICTURE-PERFECT

IDEAL IMAGE QUALITY IN EVERY SITUATION

A unique combination of features ensures outstanding image quality even in difficult conditions.

- **True HDR & latest chip generation**
for optimal dynamics
- **IR or white light outside the bubble**
no stray light, maximum contrast
- **Adaptive lighting**
can be individually adjusted according to the position of the camera lens
- **Maximum details**
capture any environment with up to 4K resolution
- **Maximum light sensitivity**
optimal image quality in any light situation
- **RPoD – Remote Positioning Dome**
for easy alignment and readjustment via remote access from any web browser

Improved low-light performance

Alignment and readjustment of the camera remotely

VERSATILE

PERFECTLY EQUIPPED FOR EVERY APPLICATION

Theoretically, more than 300 different product variants can be 'built' with DOMERA® components. This is made possible by a well thought-out system of five camera bases and various lighting rings, as well as different housing and mounting variants.

For end customers and installers, this means less time spent on implementation, minimal stock-keeping and low training effort.

- **Modular system**
with camera bases, lighting covers, adapters and mounting options
- **Dallmeier 'only one Allen key' philosophy**
saves time and cost during installation and maintenance
- **Easy replacement and retrofit**
same mounting and screw holes spacing as the previous models
- **Browser-based installation and orientation**
without additional software
- **Optional integrated speaker**
for live public address or event-triggered audio playback
- **Energy-efficient**
thanks to standard PoE (Power over Ethernet)

INDUSTRY-WIDE UNIQUE COMBINATION

PROBABLY THE MOST VERSATILE CAMERA IN THE WORLD

DOMERA®: A NEW GENERATION OF DOME CAMERAS

The DOMERA® camera series features high image quality with up to 4K resolution, HDR functionality and very high light sensitivity. This makes the cameras ideal for indoor and outdoor use – even under difficult lighting conditions.

ADAPTIVE IR AND WHITELIGHT: LONGER MAINTENANCE INTERVALS

The adaptive IR and white light LEDs are mounted in the Dual Matrix LED Ring outside the bubble and can be controlled individually. This allows users to prevent, for example, overexposure and reflections or to additionally illuminate dark areas in a targeted manner.

Depending on requirements, it is possible to switch dynamically between IR and white light illumination, e.g. to deter detected objects. The dome housing and the external mounting of the LEDs make it more difficult for spiders to settle down. In addition, there are significantly fewer light reflections, e.g. due to scratches. Both of these features significantly extend the maintenance intervals.

DALLMEIER RPOD: CAMERA ORIENTATION AND READJUSTMENT VIA REMOTE ACCESS

The motorised three-axis adjustment with the Dallmeier RPoD ensures time-saving commissioning. Its PTRZ (Pan Tilt Roll Zoom) function allows users to adjust the image section remotely and still change it at a later time. A 90-degree rotation for the corridor mode can also be realised with only a mouse click. The complete setup of the camera is browser-based and requires no additional software.

WHAT ABOUT THE SPIDER AND THE MAINTENANCE INTERVAL?

For classic box cameras with a sunshield and IR lighting the regular removal of spider webs is an enormous cost factor. Not anymore with the DOMERA® dome housing.
